Mallory Visual Indication Products

For 55 years, Mallory Sonalert has been the leading manufacturer and supplier of **audible** alarms, buzzers, transducers, and sirens. More recently, Mallory has also become known for our **visual** indication products.

Mallory's [22 mm panel alarms with LED's](#) offer a visual light as well as an audible sound when powered. In most models, the sound and light activate at the same time, but [models are available](#) in which the sound and light can be controlled **independently** comprising a true **2-in-1** device in a compact 22 mm package.

9 Vdc to 120 Vac; 16 Sounds; CUL, IP-66, & NEMA 4X

Mallory's 60 mm and 30 mm **Stacklights** (AKA Tower Lights) are available with or without sound, and in a direct mount or pole mount package. While the [60 mm Stacklights](#) go on large machines, Mallory's [30 mm Stacklights](#) are used on medium and smaller **semi-automatic equipment** such as robotics, 3D printers, label & printing machines, and laboratory, pharmaceutical, scientific, and engineering equipment. Mallory's **30 mm Stacklights** are the **lightest** and **lowest cost** in the industry. All Stacklights are [CUL approved](#).

Need an industrial [Panel LED](#)? Mallory has you covered with a complete line of skillfully designed body styles encompassing panel hole sizes from **6 to 22 mm**, voltages from **2 to 220 volts**, and multiple **termination & mounting** options. Colors include **Red, Green, Yellow, Blue, & White**. If you need **CUL** or **IP-65** rated models, we have those too.

Mallory's Stacklights, and 22 mm panel alarms with LED lights are **manufactured** in Indianapolis, Indiana with **lead-times** of stock to 4 weeks

55TH ANNIVERSARY

Mallory Sonalert is celebrating the **55th anniversary** of the [SC Series of 30mm panel alarms](#) which were introduced in **1968**. This product line is still very relevant today because Mallory continually works to improve and expand our offering using **customer feedback** and **new technology**.

While the Sonalert audible product line continued to expand in the 1970's and 80's, **SMT** technology enabled Mallory to introduce miniature [board level buzzers](#) in the mid-90's which feature **high reliability** & **superb** performance in an ultra-compact package.

In the mid-2000's, Mallory added [30mm panel mount models](#) with sounds

controlled by **software** rather than circuitry. This change reduced the time needed to generate a **new sound** from 3 months to 1 day. Mallory also decreased the **height** of the panel mount AC pulsing models from 1.9 inches down to 0.8 inches (**58% reduction**) which **increased reliability** and **reduced cost**.

Starting in the late-2000's, Mallory launched our [IEC 60601-1-8 medical alarms](#) which initially featured the 23 mm diameter **MSS Series**, but expanded quickly to include the 45 mm diameter **SBS & SBT Series**. In 2022, existing medical models were [approved by UL](#) to meet the requirements of IEC 60601-1-8 AM2 (2020) which is the latest version of this IEC specification.

Mallory's MSS Series is 23 mm x 13 mm, and produces 90 dB @ 10 cm @ 3 to 5 Vdc

Through R&D and utilizing advanced technology, Mallory introduced [industrial 22 mm panel alarms](#) in 2010 which are the **lowest cost** and **most functional** in the industry. **Key** features include:

- **Voltages** from 6 Vdc to 120 Vac
- Sound Levels up to **95 dB @ 2 ft**
- **16 Sound** Types
- [CUL Approved](#); **NEMA 4X; IP-66**
- **Finger Proof Safe Termination**

All **industrial** products mentioned above are manufactured in Indianapolis, Indiana, and feature [UL Approved](#) models with **lead-times** of stock to 4 weeks
